What is Ultrasonic Cleaning?

Ultrasonic cleaning works by producing millions of jets or streams of cavitation bubbles within a liquid which collapse against any hard surface removing contaminated particles with each implosion. As these cavitation bubbles are smaller than one micron they penetrate into all areas.

Why choose Hilsonic?

With over 35 years' experience, we pride ourselves on being the leading British experts in ultrasonic cleaning innovation, technology and construction. Our equipment, made on-site in the UK, is specifically designed and constructed for superior performance, long life and continuous service and is used in marine, power generation, aerospace, medical and many other sectors worldwide.
